

Monster Lab

Build Git out of paper

STEP 1

 2 min

Draw one monster together.

One sheet. Everyone at once.

You just invented

git commit

Never erase. Every change = a new card.

STEP 2

4 min

Two ideas. Two pairs.

Keep the good monster safe.

You just invented

git branch

A sticky note that says "my latest card".

STEP 3

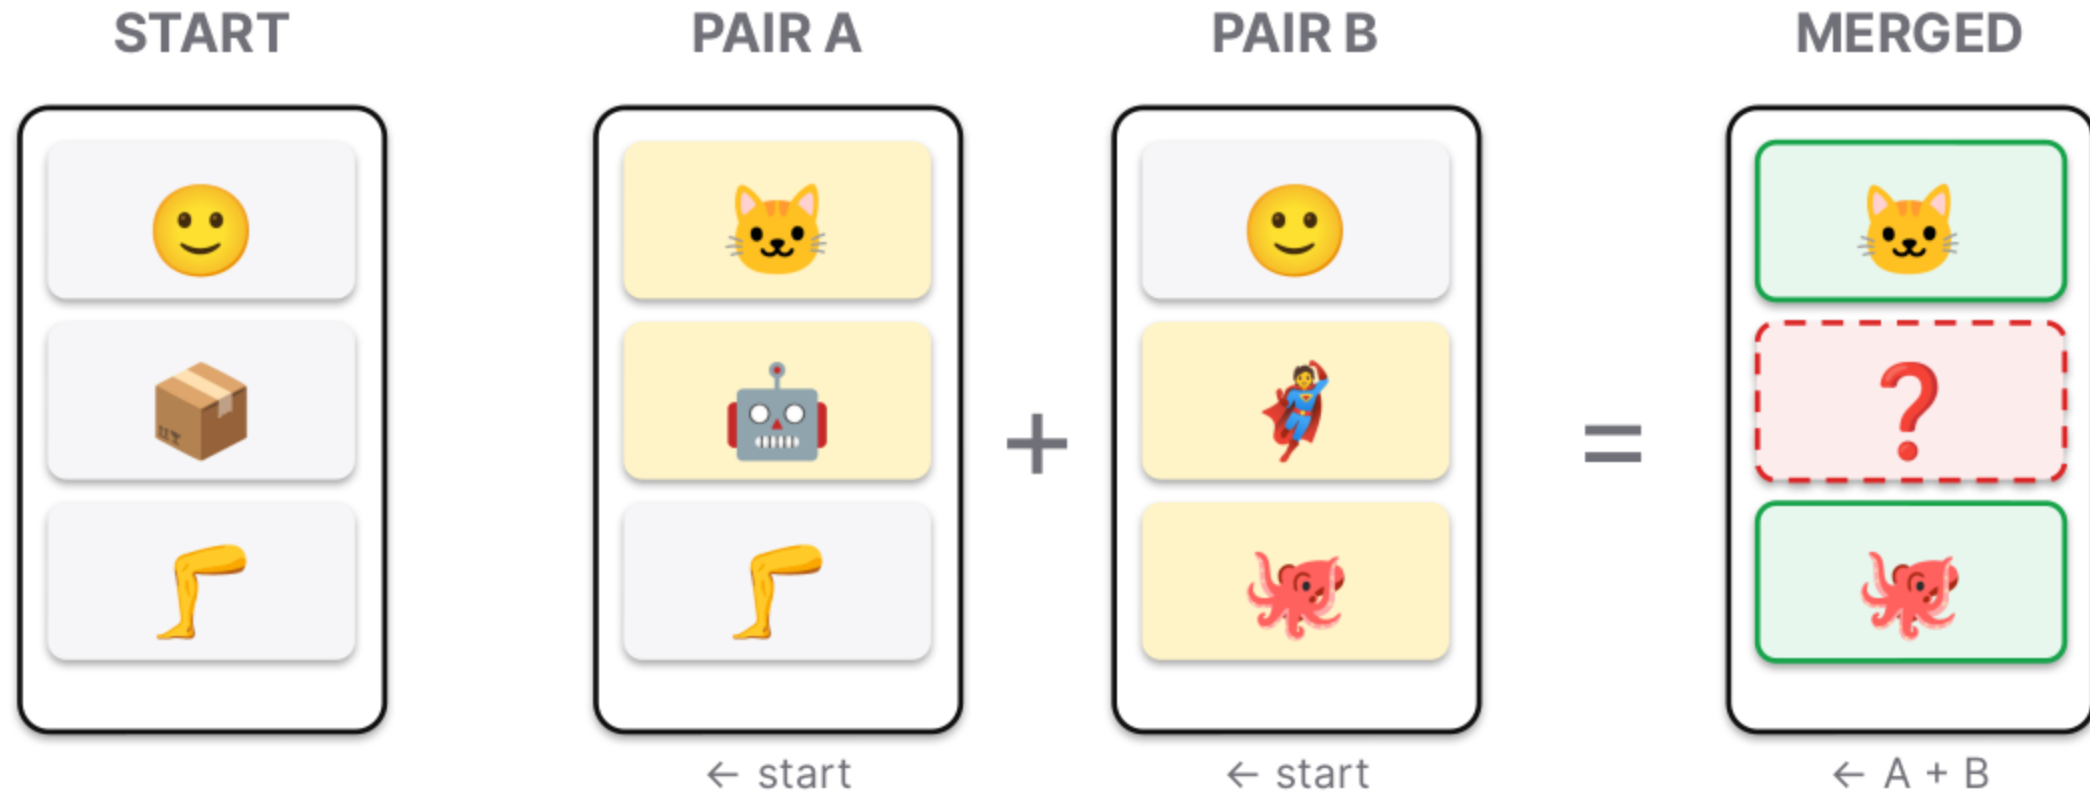

5 min

Make one monster from both.

One new card. It points back to both.

You just invented

git merge

One changed it → keep it

• Both changed it → you decide

3-minute break

Back at __:__

STEP 4

6 min

Post your card on the wall.

Wall changed? Take the new cards first.

You just invented

git pull · git push

Take the new cards. Then add yours.

STEP 5

3 min

Remove the mustache.

Everyone already has a copy.

You just invented

git revert

Don't rip it out. Add a fix card.

Boss: "Keep only the last card."

Throw the rest away. Then: who drew the tentacles?

You just invented

git push --force

Clean history. Lost history.

That's the paper

Switching to Git: Good, Bad, Ugly

Microsoft Research · ISSRE 2016

GOOD

Cheap branches.
Work offline.

BAD

Many paths to
main.
Hard to trace.

UGLY

Rebase + force
erase history.

Same story, real Git

```
$ git merge superhero
CONFLICT (content) in monster.txt
<<<<<< cat-robot
body: robot
=====
body: superhero
>>>>>> superhero
```

 Live poll

Exit ticket

3 quick questions.

QR

menti.com · ____

If you remember one thing...

Cards never change.

Sticky notes move.

That's Git.
